

Kenz Bilal

FULL-STACK DEVELOPER & AI ENGINEER

+91 9778430867 kenzbilal12@gmail.com Kerala, India github.com/KenzBilal

SUMMARY

Self-taught full-stack developer with production experience building SaaS platforms, AI-powered applications, Android apps, and IoT devices. Proficient across the stack — from embedded systems (Arduino, C/C++) to backend (Python, Node.js) to modern web frameworks (Next.js, React, Supabase) and native mobile (Kotlin, Jetpack Compose). Shipped 15+ projects including a B2B prospecting SaaS with 7 AI providers, an Electron desktop app with 3D physics simulation, and a smart assistive IoT device. Open-source contributor with a bias toward building things that work.

PROJECTS

Knight — B2B Prospecting SaaS

NEXT.JS 15 · SUPABASE · ELECTRON · 7 AI PROVIDERS

- Full-stack platform automating B2B lead generation: Google Maps discovery, 30+ point website audits, AI pitch generation, cold email outreach, and Telegram lead qualification
- Electron 41 desktop admin panel with 18+ management modules (users, billing, jobs, leads, emails, AI hub, worker control)
- Integrated OpenAI, Anthropic, Google, DeepSeek, xAI, Groq, and Cerebras with key rotation and cooldown. LemonSqueezy billing (Free/Pro \$149)

Kaze — Movie & TV Tracking App

KOTLIN · JETPACK COMPOSE · SUPABASE · ROOM

- Production-grade Android app with offline-first design, social features (follow, activity feed), episode-level tracking, and smart suggestion engine
- Cloud sync via Supabase, 12 Room DB migrations, 14+ screens, WorkManager background sync, Firebase push notifications, OTA auto-updates

EDUCATION

B.Tech CSE — IoT & AI Analytics
Lovely Professional University
Started 2025 · 3rd Semester

SKILLS

LANGUAGES

C++17 Embedded C/C++ Python
TypeScript Kotlin SQL

FRONTEND

React Next.js TailwindCSS
Jetpack Compose Electron
Three.js

BACKEND & AI

Node.js FastAPI Supabase
ChromaDB Playwright Puppeteer
OpenAI API

TOOLS & INFRA

Git Docker Linux Arduino IDE
Vercel PM2 Convex Firebase

DOMAINS

AI / ML SaaS Embedded / IoT
Open Source B2B

CERTIFICATIONS

To be added

Smart Blind

ARDUINO · EMBEDDED C/C++ · HC-SR04 · ULTRASONIC

Stick —**Assistive IoT****Device**

- Developed a smart assistive walking stick for visually impaired users with real-time obstacle detection and adaptive alerts
- Integrated HC-SR04 ultrasonic sensor with Arduino for continuous distance measurement; trigger buzzer and vibration motor when obstacles enter safety range
- Designed adaptive alert mechanism where frequency/intensity increases as obstacle proximity decreases. Compact, portable, battery-powered prototype

Portfolio: (coming soon)
